

## Simple Little Pasta Cutter

Start with a 4 inch piece of 4x4. Saw off most of one corner so there will be a flat surface against the countertop, and the opposite corner will face upward. Round off the upward corner with sandpaper.

Stick felt on the bottom so the countertop won't get scratched.

Place bag of pasta over the upward corner and press down.

Voilà !  
Each piece of pasta is cut in half without tearing the bag. Repeat the same process on each half and the pasta will be cut in quarters.
